What is IQstock?

IQstock is a Microsoft Office Business Application to assist Inventory Managers with the process of updating physical inventory stocktake results back into SAP.

Key Features

- Retrieve Physical Inventory Documents from SAP directly into Excel in order to prepare formatted count sheets
- Suitable for Inventory and Warehouse Management
- From within Excel, directly update physical inventory count results back into SAP
- Review stocktake variances within Excel, and Post differences directly to SAP adjusting recorded inventory balances
- IQstock supports flexible count sheet templates to be maintained for specific requirements thereby simplifying count administration and processing
- IQstock requires absolutely no changes to your back-end SAP system
- IQstock is fully secure, using your existing SAP login credentials
- IQstock is future proof, accessing only published SAP Business Application Programming Interfaces

Key Functions

- Format Count Sheets from within Excel for distribution and printing incorporating standard Excel presentation capabilities
- Generate flexible count labels from Excel
- Capture actual count results directly into Excel by location, collate data outside of SAP and aggregate using standard Excel formulas
- Use generic Portable Data Terminals to support scanning solutions, using Excel as a low-cost SAP integration mechanism
- Reconcile inventory counts outside of SAP to validate the accuracy of the count results prior to processing updated results
- Use Excel as the high performance and intuitive data entry mechanism
